SUBJECT: Notice about obstacles in railway freight transports in the area of the public railway infrastructure

Dear Sir or Madam!

We would like to inform you that, due to major investment and regular maintenance works to ensure the safety of railway transports in the area of the public railway infrastructure, major obstacles are occurring in the implementation of the operational timetable.

Major obstacles, which are influencing the implementation of the operational timetable:

- Modernisation of the Rimske Toplice – Laško – Celje section, uninterrupted closure of the left track until 7. 12 .2018*
- Uninterrupted closure of the line Maribor –Šentilj d.m., until 15. 12. 2018, because of modernisation. Because of the closure of the Maribor – Šentilj line the railway transports have been redirected to the Jesenice border crossing.*

Apart from the modernisation impacts and the performance of transports with ÖBB only across the border station Jesenice, past weather situation in the area of the neighbouring railways (interruption of transports at ÖBB across the border station Jesenice) is still influencing the transports.

Apart from the listed closures, further shorter closures of certain sections will be introduced in the next week, to facilitate maintenance and investment works. The information about them is published on the website of the infrastructure manager SŽ-Infrastruktura, d. o. o.

According to the large scope of the planned works in the area of the public railway infrastructure, the infrastructure manager is by using operational measures, and by cooperating with the carriers, performing activities to implement the operational timetable.

We kindly ask all the stakeholders in the logistics chain to adapt as much as possible to the situation, and to consistently comply with the operational provisions of the infrastructure manager and with the Note Nr. 2413, dated on 24. 12. 2015.

Best regards!

*Head of traffic management
Branko Čepik*
